## **Asbestos Inspection**

- Performed in accordance with ASTM Standards for Asbestos Control
- Comprehensive building asbestos surveys
- Assessment of asbestos containing materials

### **Description of Asbestos Inspection:**

At Storb Environmental, we have personnel that are certified asbestos inspectors that conduct comprehensive building inspections in accordance with ASTM standards for asbestos surveys and inspections. Our certified inspectors are trained to conduct building surveys for potential asbestos containing materials (ACMs). Samples of potential ACMs can be collected, if required, to confirm if the material contains asbestos in proportions greater than regulatory levels. All our personnel conduct asbestos investigations with proper personal protective equipment (PPE) in accordance with industry health and safety standards.
