Bulk Petroleum Storage Facility Engineering and Design

- Provides integrated engineering and design expertise for a wide range of bulk petroleum storage facilities
- Provides licensed, professional engineering capabilities

Description of Bulk Petroleum Storage Facility Engineering and Design:

Storb Environmental, Inc. has completed bulk petroleum storage facility engineering and design projects. We are registered as professional engineers in nine states, (PA, NJ, DE, MD, VA, WV, OH, and MA). We have handled a variety of projects from inception through construction completion. Examples of our completed projects have been fire and foam systems for loading racks and storage tanks, truck bottom/ top loading and unloading facilities, additive and blending facilities, pump and piping design for loading and unloading, construction management projects and construction inspections, and other consultant architect/ engineer services as may be desired.

We have also completed a number of vapor recovery, oil/ water separator, fuel handling projects, foam and fog systems for petroleum storage plants, gasoline service stations-complete design, new and renovation of office buildings, truck garages, and warehouses, bridge and culvert design, complete design of petroleum storage plants and terminals, and pipeline installations. Our primary expertise in engineering is petroleum engineering and design. We are capable of handling a wide range of engineering and design projects at the request of the client.
